

250

Proven Performance and Durability

The Small Rink Resurfacing Solution

The OLYMPIA™ 250 delivers excellent ice resurfacing for smaller rinks that rivals the quality associated with the larger ice resurfacing system. Designed for and mounted on a Kubota tractor the OLYMPIA™ 250 allows a single person to scrape, clean and resurface the ice within minutes.

Operating the OLYMPIA™ 250 is a study in simplicity. The resurfacing controls are within easy reach of the operator. Once the 250 resurfer is engaged it is a simple matter of driving around the ice surface. The ice is scraped and the galvanized steel flood pipes and towel bar provide for a smooth even ice surface.

Maintenance of the OLYMPIA™ 250 is simple and straight forward and can be handled easily by your staff.

For small training rinks to leisure operations the OLYMPIA™ 250 is the ideal solution.

The proven snow elevator-chain-paddle system moves the scrapings from the ice to the snow bin effortlessly. The wide rear-access doors on the OLYMPIA™ 250's snow bin allows for ease of dumping.

Utilizing a standard 3-point hitch, combined with the quick couple hydraulic hook-up to the Kubota's hydraulic power system is safe, convenient to use and frees the tractor for other uses during the off season.

SPECIFICATIONS

Height.....	57"
Width.....	58.5"
Length.....	43"
Water Tank Capacity.....	50 gal
Snow Bin Capacity.....	21 cu ft
Ice Shaver Blade.....	56" x 5" x 1/2"
